

CELL GUARD POP-UP HOLDER

FOR CELL PHONES, SMART PHONES, iPADS AND OTHER TABLETS

Electromagnetic radiation (EMR) emitted by cell phones, tablets, Bluetooth headsets, etc. has been linked to various stress-induced health issues. We subject ourselves to this overbearing external stressor every day. Utilizing the proprietary GIAPlex technology, the GIA Cell Guard Pop-Up Holder actively works to neutralize the effects of your exposure to harmful radiation, while supporting the body's resilience to stress at the same time. Once adhered to the back of your phone or tablet, the GIA Cell Guard Pop-Up Holder not only allows you to use your cell phone, smart phone, or tablet with the peace of mind you deserve, but it also serves as a convenient phone grip and/or stand, or a smart way to neatly wrap a phone cord.*

AVAILABLE IN

Single Pack (#39210)
4-Pack (#39211)

FEATURES*

- Proprietary GIAPlex dual-action technology, designed to neutralize the effects of electropollution exposure, as well as reinforce your body's natural resilience to it.
- Effective on Cell Phones, Smart Phones, iPads and other Tablets
- Powerful-grade adhesive for long-term, worry-free use
- Provides secure grip for texting, calling and snapping a selfie
- Can also be used as a phone/tablet stand, or to wrap a cord
- Pop-Up Holder allows for 360-degree rotation

GIAPlex™ combines the benefits of the patented noise field technology MRET™ (Molecular Resonance Effect Technology), and GIA's proprietary subtle energy technology ERT™ (Energy Resonance Technology). The combination of these two groundbreaking technologies offers an effective way to deal with the cumulative stress associated with living in today's electronic and wireless environment.*

*"For the last 10 years I have used a Cell Phone between 30 and 60 hours per week for business. During the last several years I've noticed an increase in tension in my neck and shoulder area. I also suffered with a nagging discomfort in my right ear whenever I used my phone. Once I discovered the GIA Cell Guard those problems disappeared."**

J.W., Dana Point, CA

CELL GUARD POP-UP HOLDER

FOR CELL PHONES, SMART PHONES, IPADS AND OTHER TABLETS

FREQUENTLY ASKED QUESTIONS*

What if I have a case on my phone?

If you have a case on your phone, simply apply the Cell Guard Pop-Up Holder directly to the case.

Can I move my Cell Guard Pop-Up Holder from one cell phone to another?

GIA does NOT recommend moving a GIA Pop-Up Holder from one phone to another - unless the new phone is the exact same make and model of the original phone. Different phones emit and receive different frequency ranges, therefore the Pop-Up Holder should not be transferred. Also, the adhesive will be compromised when transferring it from one phone to another.

What is the lifespan of my Cell Guard Pop-Up Holder?

The patented polymer inside every Cell Guard Pop-Up Holder has a lifespan of 1.5 years at which point it should be replaced with a new Cell Guard Pop-Up Holder accordingly.

Will the Cell Guard Pop-Up Holder affect the signal strength of my phone?

As is the case with all GIA Cell Guard varieties, the Pop-Up Holder has been designed to neutralize the effects of your exposure to EMR, while leaving the signal strength and clarity of your cell phone unaffected.

If I use the GIA Hands-Free Airtube Headset™, do I still need to use the GIA Cell Guard technology on my phone?

Yes, we still recommend you using GIA's Cell Guard technology on your Cell Phone. The best way to address EMR emitted from your Cell Phone while experiencing hands-free convenience is to use one of the four GIA Cell Guard options and the GIA Hands-Free Headset together.

"When I was introduced to the GIA Cell Guard, I was skeptical regarding its validity. However, after putting the Cell Guard on my Cell Phone, I no longer get a hot ear after continued Cell Phone use and I feel less stressed!"

J.L., San Diego, CA

THE RESULTS SPEAK FOR THEMSELVES

SAR (Specific Absorption Rate) Response Test Results Impact on Radiation Absorption into the Brain

High SAR values for cell phone without GIA's Cell Guard technology

Significantly reduced SAR values for cell phone with GIA's Cell Guard technology

Magnetic Resonance Angiography (MRA) Test Results Impact on Blood Flow in the Brain

● Good-to-excellent blood flow ▲ Fair blood flow ▼ Diminished blood flow

Control - No cell phone.
Normal blood flow.

Unprotected cell phone use. Significantly decreased blood flow.

Cell phone use with GIA's Cell Guard technology. Excellent blood flow.

Blood Microscopy Test Results Impact on Stacking of Red Blood Cells

Control blood test of human subject not introduced to EMR (Electromagnetic Radiation)

Blood test of human subject introduced to EMR generated by cell phone without GIA's Cell Guard technology

Blood test of human subject introduced to EMR generated by cell phone with GIA's Cell Guard technology
